SUMMARY

MS Information Systems student at NYU with a background spanning backend systems, mobile apps, and ML — drawn to roles where engineering depth and real-world impact both matter. Seeking internships for 2026.

EDUCATION

New York University

M.S., Information Systems; GPA: 3.6

New York, NY

Aug 2025 – May 2027 (expected)

Nirma University

B.Tech, Computer Science; GPA: 3.5

Ahmedabad, India

Aug 2021 – May 2025

RELEVANT EXPERIENCE

Advanced Research LLC

Deep Learning Intern

Jan 2025 – Jun 2025

Pompano Beach, FL

- Built and deployed a CNN-based glaucoma detection model achieving 91% accuracy on a 4,000-image test set, combining segmentation and classification stages to raise F1 score from 0.74 to 0.89
- Designed image preprocessing pipelines with normalization and augmentation using Hadoop, cutting training error by 18% and reducing preprocessing bottlenecks across distributed data jobs on Azure

Nova Softwares Ltd.

Software Development Intern

May 2024 – Jul 2024

Bharuch, India

- Launched a Flutter productivity app to the Apple App Store, reaching 500+ downloads in the first month and lifting the store rating from 3.8 to 4.5 after release
- Owned full-stack development solo across frontend, backend, and deployment, building notes, planner, and reminder modules with reliable data persistence and zero post-launch rollbacks

Institute of Plasma Research

Software Development Intern

Jan 2023 – Jun 2023

Ahmedabad, India

- Shipped a cross-platform internal workspace application in Flutter and PHP used by 80+ staff across 3 departments, implementing a multi-threaded client-server architecture for real-time clock-in, calendar, and task tracking
- Automated manual data entry workflows, cutting input time by 50% and saving approximately 10 staff hours per week across research team operations

PROJECT EXPERIENCE

Multi-Cloud AI Customer Support Platform

AWS, GCP, Azure, Gemini, RAG, Python, React

- Built a peer-to-peer multi-cloud AI support platform across AWS, GCP, and Azure with no central orchestrator, using SNS/SQS event ingestion, Cloud Run microservices, and Azure Confidential Ledger for tamper-proof audit logging
- Designed a RAG pipeline using Gemini 2.5 Flash and Vertex AI embeddings with FAISS vector search, achieving 95%+ intent classification confidence with automated routing and human-in-the-loop review for edge cases

Serverless Event-Driven Workflow Automation

AWS Lambda, S3, SQS, SNS, Docker

- Architected a serverless pipeline on Lambda, SQS, and SNS handling 10,000+ events per day at 99.9% uptime, integrating API Gateway and Docker for modular, fault-tolerant deployment
- Designed retry logic and dead-letter queues that automatically recovered 98% of failed events, eliminating manual intervention for transient failures

Real-Time Auction Management Platform

Django, React, MySQL, Socket.IO

- Built a full-stack real-time auction platform supporting 500 concurrent bidders via Socket.IO, implementing async Python backend APIs to handle high-concurrency traffic with low latency
- Prevented race conditions in bid logic by optimizing MySQL transactions and indexing strategies, maintaining 100% data integrity under concurrent write load

Real-Time Fraud Detection System

Apache Spark, CNN, Python

- Processed 2M+ financial transactions per day in real time using Apache Spark streaming, training a CNN fraud classifier that achieved 94% precision with a sub-2% false positive rate
- Designed the system architecture for scalable stream ingestion and low-latency classification, supporting high-throughput transaction volumes without batch delays

SKILLS SUMMARY

Languages: Python, Java, C++, SQL, JavaScript

Frameworks & Libraries: Django, Flask, React, Node.js, TensorFlow, Apache Spark, XGBoost, Socket.IO, Flutter

Cloud & DevOps: AWS (Lambda, S3, SQS, SNS, API Gateway), GCP (Cloud Run, Vertex AI, Firestore), Azure, Docker, Kubernetes, Git, CI/CD

ML & Data: CNNs, XGBoost, image segmentation, feature engineering, data pipelines, stream processing

AI & Agentic Systems: LLMs, RAG, embeddings, prompt engineering, LangChain, vector databases, Gemini, Cursor, GitHub Copilot

Databases: MySQL, Microsoft SQL Server, PostgreSQL, Firestore

CS Fundamentals: Data Structures, Algorithms, Multi-threading, Concurrency, Distributed Systems, Hadoop
